

# **DISTRICT WEED MANAGEMENT** **EQUIPMENT**

As part of a large effort by many to ‘paint a picture’ of the status and needs of noxious and invasive weed management groups in Nevada, we have been asked to gather information from conservation districts. This information will be used in an effort to secure funding to help these groups. While many are making great strides in reducing these threats, we don’t have an accurate statewide accounting of the types of equipment already being used and the type of equipment needed to adequately address the problem. This is one piece of the puzzle that is being addressed to try and formulate a statewide needs analysis. Please take a few minutes out of your busy schedule to help in this effort. Your participation is appreciated.

What type of equipment does your Conservation District or CWMA (if applicable) currently own that is used to control noxious weeds? (i.e. spray booms, GPS devices, computer mapping software, tanks and their size, ATV’s, backpack sprayers, pick-up trucks, trailers, tractors, etc.) Please list all and their size where applicable.

Does your district lease or share this equipment with other individuals or groups?

Is the demand greater than the supply?                      What type(s) of equipment and how many would be needed to fill the demand?

What type of equipment would enable your district to more efficiently and/or effectively manage noxious weeds?
